EIS000329

RECEIVED
NOV 18 1999

Dear Ms. Dixon,

1 We vehemently oppose the Yucca Mt. plan for burying atomic waste. There is now no safe place or manner for storing such poison. So we must choose the least dangerous (in the very long run). Burying it there remains too dangerous - and monitoring it for 20,000 years will allow it to be forgotten and so become another cancer in our bodies. And the Yucca plan is still another deadly crime we commit on our Indians (added to our previous enslavement and genocide of them). MRS
2 seems to be the lesser evil "answer". (Nuclear
3 electric plants need to be closed and replaced by less deadly sources.)
[and less expensive]

Sincerely,

M. & M. Richard & Anne Lindstrom
