Hello,

The World Book Encyclopedia, 1992 Edition says that radioactive wastes "remain highly radioactive for thousands of years and can cause serious radiation damage to all living things." The plan to ship radioactive waste through St. Louis, Illinois, and other U.S. regions, to a disposal site in Nevada, will expose many,

1

1 continued

current and future residents of these regions to an awful risk. Two recent train accidents in this area show one flaw in the plan. My children and other's children (your children) deserve a planet as clean, safe, and healthy as we can pass on to them.

My opinion is that

2 nuclear waste should be entombed where it is created, and no more nuclear radioactive waste

3 should be generated. Disposal site plans only permit the fantasy that true disposal is

4 possible.

Thousands of years of high radioactivity cannot be contained by humanity.

I strongly object to

5 the transport and storage of this material anywhere.

Sincerely, Margaret Muller
