I request that these comments be made a part of the official record.

1 The proposed plan by the PFS company cannot be allowed to reach fruition. The area is still seismically active. The nuclear rods create a horrendous catalyst for catastrophe in this area.

The Salt Flats are still rebounding from the pressure of the ancient Lake Bonneville. Further, the crust in the Basin-and-Range is the thinnest on the North American tectonic plate. The area is prone to tremors, and is between two seismically sensitive mountain ranges.

It is lunacy to overlook this one factor to allow a company to use a desolate but high risk area for storage of radioactive material. If Utah is engaged in earthquake-safe measures and construction, why is this company exempt?

Please note: For your comment(s) to be considered in the Final Environmental Impact Statement, your comment(s) need to be received by the Department of Energy by February 9, 2000. To the extent practicable the Department will consider comments received after February 9.
