Dear Ms. Dixon, EIS Managment:

My class and I have been studying about nuclear power plants in Science class.

1 I think that each state should keep their own waste. We did not make the waste so we should not have to store it in our state. We did not make it and thousands of people would be exposed to the radiation like kids, adults, and tourrist.

2 There is always alot of people in Las Vegas. When they haul it in trucks there is going to be alot of acidents as the trucks will be going through Vegas for many years.

3 Could you please reconsider transporting the waste and storing it in Yucca Mountain. Why did you choose Nevada when we have no nuclear power plants?

Sincerely Adam Berkness
