1 Railroads and highways were built to move people and encourage commerce. Today - we have long freight trains and huge tractor trailers carrying safe and non-safe materials and travel or just living is more dangerous.

I hope you will not add to our gamble by adding more non-safe materials to what we now have on our highway & rails. The odds of shipments almost every other day for 30 years being accident free is too big of a gamble!!!

Leave the waste where it is - a contaminated area can not become more contaminated. Hopefully science will have a better answer in the future.

Yours truly,

Alice Donaldson
