Nevada and Yucca Mountain is not a disposal for nuclear waste. There should be no waste. Nevada is not a waste land but a living viable land not meant as a storage for dangerous by products any more than shipping these wastes into space.

It is plain silly that each person is not responsible for their own garbage and equally so for dangerous products or by-products. The government has the responsibility for taking care of this waste in the safest posible manner available for the future.

Anyway Nevada has said NO to putting nuclear waste here so many times - why do you keep pressuring us - ?? Find a safe useful way for this - Not Storage that is dangerous to humanity.?

Sincerely
Darlyne Clark
Nevada property owner
Since 1959
