Carol Hanlon,

I am writing to voice my concern about the movement of nuclear waste through my community and any other communities.

Please urge whomever to work for alternative fuel sources.

According to my local newspaper there is work going on to use poultry waste and pig waste turned into high quality oil. Also how about wind and solar power.

Nuclear is much too dangerous!

Please pass my concerns and those of others on to the appropriate ears.

Thank you.

Joy H. Woodruff
