To Whom it may concern,

I want to be on record as being vehemently opposed to the shipping of nuclear waste, particularly high level nuclear wastes across the United States and the planned storage of said waste at the Yucca Mountain repository. The current shipping technology (casks) has proven to be ineffective under extreme duress (eg. condition created by the recent train fire in Baltimore, high explosives/missile impacts, etc.). In addition, the geologic conditions of Yucca Mountain are not sufficient for said nuclear waste storage.

The only solution for now is the immediate cessation of nuclear waste generation and optimum storage on site at the closed nuclear power plants and other generators, to be monitored and maintained while storage technologies continue to better and evolve.
