

Good evening!

NOV 30 1999

My name is Valarie Sipp. My dad Pete Sipp and my brother Cyrus Sipp wished they could have come to this evening. I live near Augusta. I also live near a nuclear reactor, which is Vogtle.

3 [Our health is more important than ya'll spending money on making more nuclear reactors, not closing down the nuclear reactors, and stop making more waste. So in order for us and 12,000 generation to be healthy, the nuclear reactor needs to be closed down, stop making nuclear reactors, and stop making more waste. After the nuclear reactor is close down, we would have a less chance of nuclear melt down.

1 [I have realized ya'll have spent a lot of money and don't want to lose the money and also feel embarrassed that your YUCCA Mountain project isn't going to work.] In order for us to be healthy ya'll need to start a new career by building dams, hydroelectric, solar, and wind power.

My family and I live in a passive solar house which cools and heats all by itself. My dad wants to build a hydroelectric waterwheel that will generate electricity. He has started on the process and will finish soon. He is very excited about the waterwheel.

2 [So ya'll need to close down the nuclear reactors, stop making nuclear reactors, and making more waste. And also start a new career by building dams, hydroelectric, solar, and wind power.] After the new career is started and continues to its process, our lives will become healthier and happier. And also to the 12,000 generation that is in the future. It has been really nice commenting on this evening on this evening. Thank you for your support.
