Comments: (If possible, please reference section number and/or page number in document if applicable.)

1 I have done some research on Yucca Mountain, and was disappointed to learn that in 1983 the government requested the DOE to research mine sites in six states. Only to tell the DOE to just research NV in 1987. Why was that? Is it because Nevada is a smaller state with less money and political power? Then in the Review Journal last week, they said all safety standards had been dropped for Yucca Mt. Is it not true that there is all fault by Yucca Mt? Hasn't Nevada had earthquakes? What about the water table that is under Yucca Mt?

2 I am concerned for all Nevadans with a repository at Yucca Mt, but I have concerns for all of those in the path of transporting the nuclear waste. Twenty-three years to get here, must be a big load. What a shame to become a waste dump for all these other states.

Please note: For your comment(s) to be considered in the Final Environmental Impact Statement, your comment(s) need to be received by the Department of Energy by February 9, 2000. To the extent practicable the Department will consider comments received after February 9.

Please feel free to attach additional pages; more postage may be needed. If you prefer to mail your comments, you may use the back side of this sheet as a postage-paid, self-mailer. To do so, fold in thirds along the dotted line so address and postage-paid notice are visible; then secure with tape.
