PUBLIC STATEMENT OF PAUL CASTRO

EIS000608

DEC 02 1999

MR. CASTRO: My name is Paul Castro. I got a Bachelor's degree in geology from Humboldt State.

1 [Nevada per area square miles is probably the most seismic state in the nation. This is an extension area here that is as the earth cools off, there are going to be more problems form or you have more earthquakes happening.

2 This is ridiculous that they want to bury nuclear waste here. It really is. They should put it out in the plains of Nebraska or something where it's more stable. [Why we were picked, it's beyond me.] That's it.
