Gentlemen and Ladies:

I attended the Public hearings on The Yucca Mountain Repository Project held in Chicago on February 1, 2000.

1...

I feel that that project should not go forward. There are 200 local, state, and national public interest organizations against the proposed plan. I feel that instead of public hearings on Yucca, the DOE should be holding public meetings on how to start over on a high level nuclear waste program which would involve the finest scientific minds and public meetings.

2

This is a scary program which threatens our environment and our very lives for 30 years to come. Alternate energy sources should be taken seriously, no matter the cost, and ways we could conserve energy uses.

1 cont.

I know this is a difficult problem to solve but I feel we must stay with the task until a safe solution is found.

Most sincerely,

Lenore Hauser
