North Las Vegas, NV 89036-0307

RECEIVED

MAR 06 2000

Dear Wendy,

Please enter the enclosed petitions
as official public comment on the
Yucca Mtn. DEIS. Thank you.

Sincerely,

Kevin Kamps
Nuclear Waste Specialist

Don't Waste America! The Only Cure for a Nuclear Waste Accident is Prevention

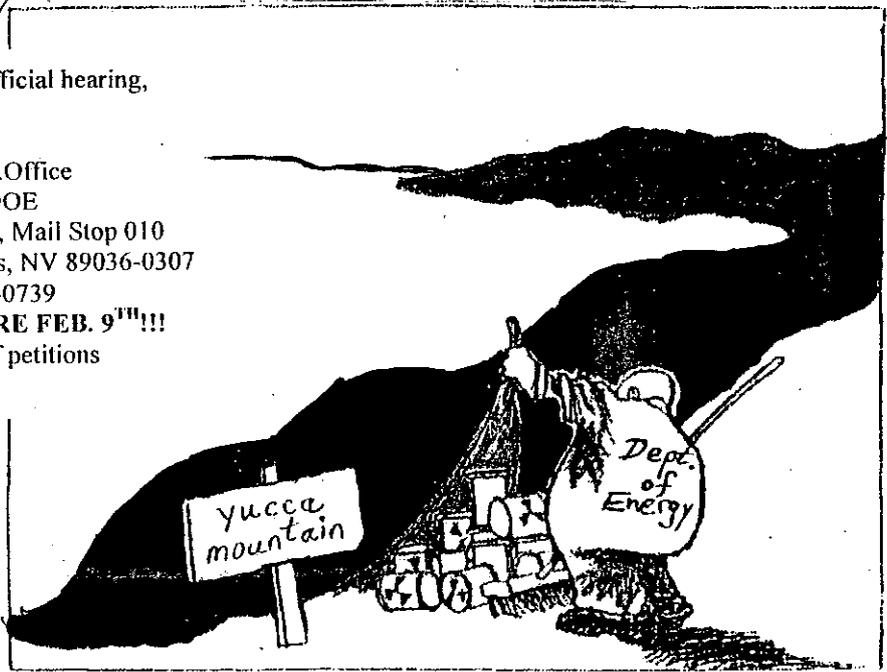

DOE proposes:

EIS001967

- 1 • To transport tens of thousands of high-level radioactive waste shipments in inadequately tested casks by truck and train through 43 States over the course of the next 30 years
- 2 • To dump tens of thousands of tons of these deadly nuclear wastes at Yucca Mountain, Nevada, an unsuitable site riddled with active earthquake fault lines, fissures that will allow the fast flow of radioactive poisons into the groundwater below, and perhaps even a magma pocket beneath the mountain threatening a catastrophic flood of superheated water into the repository
- To do this irregardless of the fact that people live downstream and will be exposed to harmful radioactivity for hundreds of thousands of years into the future when they drink the contaminated water and use it to irrigate their crops
- 3 • To ignore the fact that Yucca Mountain is sacred traditional land belonging to the Western Shoshone Indian Nation, as affirmed by the Treaty of Ruby Valley signed by the United States in 1863.
- 4 DOE, you do NOT have my permission to run Mobile Chernobyls past or near my home town just to dump them at a site YOU KNOW will leak. No way, no how. I will take action to stop this, small or large. Yucca Mountain cannot isolate the wastes from the living environment, and should be disqualified from further consideration as the permanent repository. We should not move the wastes unless we're sure doing so will improve the situation, not make it worse.

- To do this irregardless of the fact that people live downstream and will be exposed to harmful radioactivity for hundreds of thousands of years into the future when they drink the contaminated water and use it to irrigate their crops
- To ignore the fact that Yucca Mountain is sacred traditional land belonging to the Western Shoshone Indian Nation, as affirmed by the Treaty of Ruby Valley signed by the United States in 1863.

DOE, you do NOT have my permission to run Mobile Chernobyls past or near my home town just to dump them at a site YOU KNOW will leak. No way, no how. I will take action to stop this, small or large. Yucca Mountain cannot isolate the wastes from the living environment, and should be disqualified from further consideration as the permanent repository. We should not move the wastes unless we're sure doing so will improve the situation, not make it worse.

Don't Waste America! The Only Cure for a Nuclear Waste Accident is Prevention

DOE proposes:

EIS001967

- To transport tens of thousands of high-level radioactive waste shipments in inadequately tested casks by truck and train through 43 States over the course of the next 30 years
- To dump tens of thousands of tons of these deadly nuclear wastes at Yucca Mountain, Nevada, an unsuitable site riddled with active earthquake fault lines, fissures that will allow the fast flow of radioactive poisons into the groundwater below, and perhaps even a magma pocket beneath the mountain threatening a catastrophic flood of superheated water into the repository
- To do this irregardless of the fact that people live downstream and will be exposed to harmful radioactivity for hundreds of thousands of years into the future when they drink the contaminated water and use it to irrigate their crops
- To ignore the fact that Yucca Mountain is sacred traditional land belonging to the Western Shoshone Indian Nation, as affirmed by the Treaty of Ruby Valley signed by the United States in 1863.

Don't Waste America!
The Only Cure for a Nuclear Waste Accident is Prevention

DOE proposes:

EIS001967

- To transport tens of thousands of high-level radioactive waste shipments in inadequately tested casks by truck and train through 43 States over the course of the next 30 years
- To dump tens of thousands of tons of these deadly nuclear wastes at Yucca Mountain, Nevada, an unsuitable site riddled with active earthquake fault lines, fissures that will allow the fast flow of radioactive poisons into the groundwater below, and perhaps even a magma pocket beneath the mountain threatening a catastrophic flood of superheated water into the repository
- To do this irregardless of the fact that people live downstream and will be exposed to harmful radioactivity for hundreds of thousands of years into the future when they drink the contaminated water and use it to irrigate their crops
- To ignore the fact that Yucca Mountain is sacred traditional land belonging to the Western Shoshone Indian Nation, as affirmed by the Treaty of Ruby Valley signed by the United States in 1863.

DOE, you do NOT have my permission to run Mobile Chernobyls past or near my home town just to dump them at a site YOU KNOW will leak. No way, no how. I will take action to stop this, small or large. Yucca Mountain cannot isolate the wastes from the living environment, and should be disqualified from further consideration as the permanent repository. We should not move the wastes unless we're sure doing so will improve the situation, not make it worse.

Protect Western Shoshone Indian Land at Yucca Mountain, Nevada from a High-Level Nuclear Waste Dump!

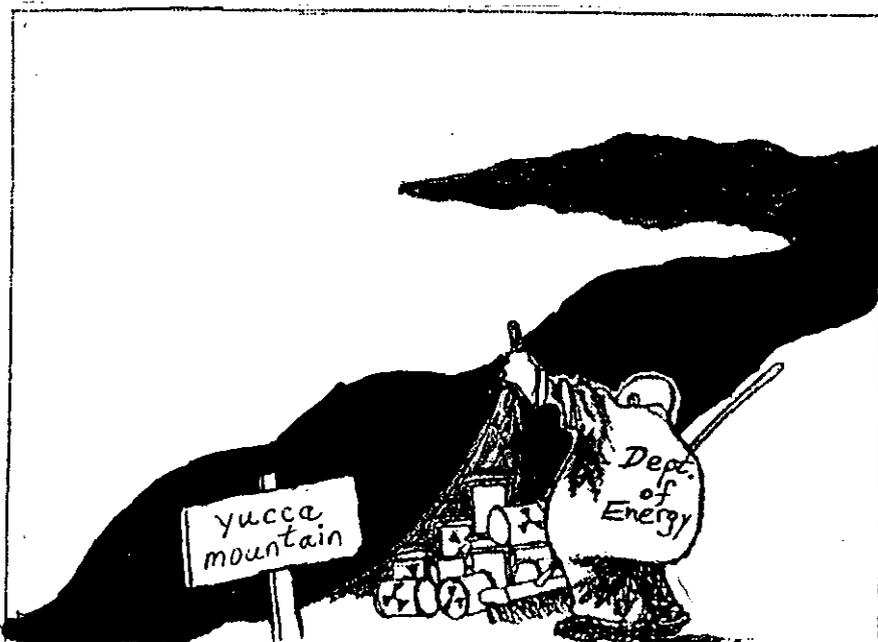

EIS001967

Since high-level nuclear waste dumps are under the Environmental Protection Agency, which is mandated to protect public health and the environment, not to cave in to pressures from the nuclear establishment, we the undersigned demand:

- The Safe Drinking Water Act must be upheld, for the worst doses to communities living downstream will come from use of contaminated groundwater.
- Radioactivity is deadly for hundreds of thousands of years. EPA must protect future generations through the period of peak doses, up to 300,000 years into the future.
- EPA proposes a 20 kilometer (12 mile) nuclear sacrifice zone. Dilution is not the solution to pollution. This is unacceptable. Compliance should be met on-site, or at the site boundary.
- EPA should protect the most vulnerable persons: subsistence farmers, especially pregnant women, the unborn within their wombs, children, the infirm, and the elderly.

An unsuitable site should not be used for high-level nuclear waste disposal. If Yucca Mountain cannot meet the standards, it must be disqualified.

EIS001967

- To transport tens of thousands of high-level radioactive waste shipments in inadequately tested casks by truck and train through 43 States over the course of the next 30 years
- To dump tens of thousands of tons of these deadly nuclear wastes at Yucca Mountain, Nevada, an unsuitable site riddled with active earthquake fault lines, fissures that will allow the fast flow of radioactive poisons into the groundwater below, and perhaps even a magma pocket beneath the mountain threatening a catastrophic flood of superheated water into the repository
- To do this irregardless of the fact that people live downstream and will be exposed to harmful radioactivity for hundreds of thousands of years into the future when they drink the contaminated water and use it to irrigate their crops
- To ignore the fact that Yucca Mountain is sacred traditional land belonging to the Western Shoshone Indian Nation, as affirmed by the Treaty of Ruby Valley signed by the United States in 1863.

DOE, you do NOT have my permission to run Mobile Chernobyls past or near my home town just to dump them at a site YOU KNOW will leak. No way, no how. I will take action to stop this, small or large. Yucca Mountain cannot isolate the wastes from the living environment, and should be disqualified from further consideration as the permanent repository. We should not move the wastes unless we're sure doing so will improve the situation, not make it worse.
