Dear Dr. Summerson:

1. I'm duly impressed with the fact you sent me NOT ONE(1), but TWO(2) copies of the 'Supplement to THE DEIS, et al', -- coupled with the parallel fact that, however inexplicably, my name is NOT included among the roster of recipients on the distribution list in the rear pages of the report.

Nevertheless, my final Public Comment to DOE/OCRW/M/UMPO is as follows, to wit:

2. On axiomatic grounds, it's scientifically and Technologically impossible to 'guarantee' the safe, secure and human-intrinsic impermeable underground storage of HLW at Yucca Mountain, Nevada, or elsewhere nationally, or anywhere on the planet.

Conversely, -- the underground storage of my class of Nuclear Waste is tantamount to the direct injection of toxic radionuclides into the human-accessible environment, and constitutes intentional mass genocide on a historically unprecedented scale, adversely impacting human and all other species of organic life and the natural environment requisite to sustain life, -- intergenerationally, and for the rest of geologic time, -- and ultimately is potentialized as causal of the extinction of Human Consciousness itself.

Thanks, and 'thanks again', for twice remembering me in your distribution thoughts (if not your list).

Sincerely, Tom McGowen,
