RE: "Yucca Mountain Supplement to the Draft EIS"

Dear Dr. Summerson:

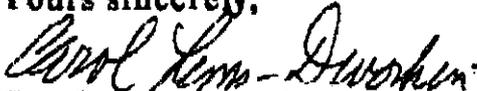

I continue to be vehemently opposed to the Yucca Mountain project. No matter what rationalizations are given, the plain fact remains that no safeguards exist to give real protection to the people in that area - or even to the rest of us citizens in the United States! There is still too little known about containment of radioactive materials. There still are far too many possibilities for human error or unpredictable calamities of all sorts to justify such a risky undertaking! Let me reiterate: There ARE no safeguards!

Are you aware of the recent incident in which a train transporting hazardous materials took off on its own, and traveled for miles without any human being aboard and directing it? This was but one of countless potentially disastrous happenings that no one could have predicted.

Fortunately, owing to sheer luck, in this case there were no fatalities or injuries. But this is just one small example of the kinds of variables, the possibilities for human error, the frightening assortment of unforeseen events that could happen were the Yucca Mountain project to be undertaken!

The Yucca Mountain project continues to be one colossal, dangerous "brainstorm," and we can only hope and pray that this abhorrent attempt to solve a major problem will soon be dropped from all consideration - forever!

Yours sincerely,

Carol Lems-Dworkin
