1 The EIS is not adequate for several reasons:

The region is earthquake-prone, and therefor not safe for such use.

Water flows beneath the mountain and could infiltrate the waste containers, corrode them and carry radioactive waste into the groundwater.

More than 60 million Americans live in 43 cities along nuclear waste transportation routes. It is not acceptable for even a small risk of serious accident during transportation of such material.

The EIS should explain that such concerns render the proposed waste disposal plan unacceptable.
