George W. Bush

Washington D.C

Dear Mr. Bush

**I am very concerned about the Sacred Lands becoming wastelands, as you probably all ready know about the nuclear waste site in Nevada. The nuclear waste, is a byproduct of nuclear fission from power plants in that region, it is unfortunately the most lethal substance created by mankind. The major problem is that more then 30,000 metric tons of this waste are currently stored inside of many reactors across the country.**

**I know that you have a lot of important decisions on your hands with the country, but all that I ask is that you talk to congress about this problem and see if any positive out comes can be resolved with this important hazardous issue. I would suggest cleaning up the waste and properly disposing of it.**

Thank You:

*Ryan Hickey*
