Federal Record Status Not Determined

Dear Editor and DOE officials:

The people who create and utilise nuclear energy should also bear responsibility for the storage of the waste that is generated. In this case, I am speaking of the people of my community in San Luis Obispo, CA. It is irresponsible and immoral to create dangerous radioactive waste which will continue to be dangerous to life for hundreds of thousands of years, and then ship it off to other communities. I feel the people of Nevada are already shouldering enough responsibility for and the effects of having the Nevada Nuclear Testing site in their backyard and it seems that adding more toxic or radioactive material to their current burden would only exacerbate any harmful effects that may be already occurring in the Nevada population. It is not only the eventual site of storage, in Nevada, which I think is unwise and irresponsible to consider, but also the transportation of that waste through numerous other communities and populations along the way. If there is to be any solution to the problem of radioactive waste storage, it is most likely to come from the communities who are most affected by it, the local communities who not only get the "benefits" of the energy produced but

also have the ultimate measure of responsibility for the repercussions of those "benefits". Let us keep our waste and let your state keep its own problems, and together, may we find a way to meet all of our needs while thinking of future generations with a respectful and responsible attitude. Thank you for your consideration,

Dia McAfee

347 Mars Ct.

Nipomo, Ca 93444

San Luis Obispo County
