5           ARTHUR HORSELL: Hello, ladies and gentlemen.

6           I'm Arthur Horsell, Carson City. I'll make it brief.

7           7           I don't think any state -- we've all had waste

8           8           in every state. And it's always been traditional that

9           9           every state keeps their own wastes. Could you imagine

10          10          us wanting to take all the garbage from the State of

11          11          Nevada and give it to California? Do you think they

12          12          would raise their arms or raise hell with us?

13          13          Naturally.

14          14          I hope this stuff could be neutralized, but if

15          15          it can't, there is no safe place to transport it. We've

16          16          had trouble with hydrogen bombs when they've been

17          17          broken, radiation.

18          18          I just -- I think this thing is -- we'd be

19          19          lucky if the U.S. senate gets to vote on this. And I

20          20          think it's -- I think we're screwed. And I feel that we

21          21          just haven't got a fair hearing at all.

22          22          Thank you very much for the comments.
