 Comments: Sirs:

I would appreciate your changing your tactics for disposing of radioactive waste. Please focus on the health issues and transportation issues and environmental issues that would be involved if your proposed plan is ever accepted by anyone other than DOE employees and Power Company executives.

Neutralization is the answer and Research is the key. Money spent on your glossy propaganda could just as well go into research. Japan and France have almost the answer. Join them in their effort to keep our world safe.

How do we get the monies needed for research? A fine tax break to all Power Companies who mandatorily contribute a decent & defined percentage of their gross to a well organized Research Co-op. (consisting of the University Labs around the country who now concentrate on that effort, or who would if properly funded.)

Thank you for your consideration. Sincerely, Nancy Munger
